

HeatReg controls the electrical floor heating with many features to optimize the heating in the home. With the scheduling function user can optimize the heating time of the home, so that energy is only consumed when there is someone at home. HeatReg saves energy by automatically turning off heating if it detects that a window/door has been open for a longer period. Wooden floors can be protected from excessive heating with the floor temperature protection. Bathroom floors can be kept dry with the power-controlled heating which is based on time intervals and not temperature.
