HeatReg Smart

HeatReg Smart allows you to control a heating cable rated up to 3000W either manually on the display or via the SG Smart app. It can be used like a thermostat or output can be regulated with a timer. The desired temperature can be regulated manually or you can use the SG Smart app to set a timer for HeatReg to switch between Comfort and Eco modes. This optimises energy consumption, for example by putting HeatReg into Eco mode at night and when you are out. HeatReg Smart includes adaptive heating, where the thermostat learns at what times the room is to be heated. In addition, the open window function, child lock, max temperature limit for the floor sensor, etc., can all be regulated through the SG Smart app. The sensor is included in the HeatReg Smart packaging.
