

LEDDim 350 with digital phase cut dimmer ensures stable dimming of the light even without connection N, which is optional. The dimmer automatically adapts to the light sources and ensures that the maximum light level is stable. It is possible to adjust light levels to the light sources by manually setting the minimum and maximum level. Switch the light on/off from two-way wall switch for multiple entrance points in corridors and staircases.

# LEDDim 350
