

StripLine Profiles

StripLine is a flexible LED strip system for architectural lighting effects in ceilings, walls, niches and cabinets, for both indoor and outdoor use. It provides a premium light quality with high efficiency and great colour rendering. The LED strip is rated to IP54, has tape on the back for mounting and comes with connection cables already assembled. Lifetime 100.000h (9W/m). The LED stripe must be fitted in one of the available StripLine aluminium profiles for surface-mounted, corner, recessed or frameless installations. It can also be used independently in indoor settings. The profiles are supplied with a solid polycarbonate front diffuser that can be easily attached and removed. The front diffuser is also supplied as a roll, providing the option of very long, continuous fronts. (The diffuser on roll and the Round Diffuser are not compatible with the Slim and Soft profiles) Different driver kits are available, dimmable with phase-cut or push dim. Driver kits come complete with screwless terminal block for looping. The drivers are rated to IP20. To control the light, use a remote control and/or pulse switch. The LEDs are positioned at very brief intervals and deliver an even light. StripLine can be cut per 3.8 cm (9w/m), 3.3 cm (15w/m) and 7.1 cm (RGBW) to customise each individual installation. When cutting, silicone should be applied to maintain water protection.
