# Connect Switch

Switch for use in the SG Connect system. The switch allows you to manually control the Connect system and comes with both single and double toggles. The single toggle enables you to switch on/off and dim up/down. The double toggle has the same functions as the single toggle, as well as the ability to activate two scenes. The switch is based on EnOcean technology, making it self-powered and battery-free. The energy necessary to transmit the signal is generated by pressing the switch. It can be used stand-alone but also fits into SG Install frames and surface-mounted housings. The switch is easily added to the system with the SG Connect Commissioning App. Light and scene control in the SG Connect system via Zigbee. Can be mounted in a wall box, glued to the wall or placed loosely on a desk. Supplied with single and double toggles in the box to suit the user's needs.
