

LEDDim Smart Floor

LEDDim Smart Floor is an indoor phasecut dimmer to be placed on the floor for connecting floor or table lamps - alternatively wall mount with slots on the back. The dimmer has a big button on top to On/Off or long push to regulate light level. Connect either a Europlug directly into it or connect, up to, 3 lamps via the terminals. It's possible to program without dimming and functioning as On/Off for lamps that requires this.
