

DALI to Phasecut Pill

Implement all phase cut dimmable light sources using DALI. Convert a DALI signal into phase control dimming. Can be used anywhere you wanted a phase control dimmable fixture in a DALI installation. You can connect multiple phase control dimmable fixtures to one shared DALI address, enabling a simpler installation with fewer DALI addresses. Save time and money compared with a full DALI installation. Quick and easy connection using two connection boxes: one 5-pole for the DALI connection and one 3-pole for the connection to the fixture.
