

Etne is the perfect choice for storage rooms, hobby rooms and corridors, providing good light and wide light distribution. Easy installation directly in the ceiling or on the ceiling box, with loopable screwless terminal blocks and prepared for hidden or open cabling. Etne with a PIR sensor turns the light on at movement and switches off after a chosen time, thereby saving energy. The sensor does not detect through walls or doors. The PIR sensor also features an adjustable daylight sensor that only turns on the light when it's dark. Etne with a PIR sensor can act as a master controlling up to ten other luminaires (slaves).

Etne
